EXAMINER'S AMENDMENT

In claim 18, last line, replace "the load" with – a load – (for antecedent basis purpose).

Drawings

The drawings were received on 8/4/05. These drawings are acceptable.

Reasons for allowance

The following is an examiner's statement of reasons for allowance:

1. In response to Applicant's Amendment filed on 7/28/05, the rejection made in the last Office action on the Balteanu reference is withdrawn.

2. None of the prior art disclosed or suggested to show the particular structure and/or the particular operation recited in these claims namely: **"a current modifier, coupled to the differential amplifier, the current modifier altering current in the differential amplifier to adjust current through the load"** in combination with "a differential amplifier", "the load" and "the dual differential switching stage" as recited in claim 1; **"a current modifier, coupled to the RF amplifier stage, the current modifier altering current in the RF amplifier stage to adjust current through a load"** in combination with "a Gilbert cell" as recited in claim 18; **"sinking current from the amplifier stage to alter current through the mixer stage"** in combination with "providing a Gilbert cell ..." as recited claim 27; **"means, coupled to the means for amplifying, for injecting current into the means for amplifying to reduce current through the means for receiving the amplified input signal and for providing a**

balanced differential output signal by supplementing current in the means for amplifying” in combination with “means for amplifying” and “means for receiving” as recited in claim 28; “means, coupled to the means for amplifying, **for sinking current from the means for amplifying to alter current through the means for receiving the amplified input signal and for providing a balanced differential output signal**” in combination with “means for amplifying” and “means for receiving” as recited in claim 29; “first and second current sources, each coupled to the differential amplifier, **the first and second current sources altering the amplification of the first input signal**” in combination with “a differential amplifier”, “a load” and “a dual differential switching stage” as recited in claim 30.

3. The prior art references submitted by the applicant on IDS form received on 4/15/04 was reviewed and considered. However, as noted above, the limitation “the current modifier” (or sinking current step, or means for injecting current or means for sinking current or the first and second current sources) is not disclosed. Therefore, the claims are patentably distinct over all these prior art references of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
